

New! **ATD**  
**COLOR-LINK**<sup>®</sup>  
 screw post system - patent pending

**The only endodontic post premounted  
 on a disposable screwdriver**

**ATD COLOR-LINK** is an innovative endodontic post system made of gold-plated alloy and titanium. The unique feature of the ATD COLOR-LINK post system is individual **premounting on disposable plastic screwdrivers**. This enables the dentist to **insert the post** in the root canal **without touching it** — easily and hygienically.

The ATD COLOR-LINK modular starter kit has been developed to **enable faster and easier choice of correct post size**. The color-coded screwdrivers indicate different size posts.

The ATD COLOR-LINK post **is already mounted on a disposable screwdriver**. The post can be inserted in the root canal **eliminating contact with hands for easy use and maximum hygiene**.

The head of the post has an undercut and is highly retentive, allowing optimal bonding with the reconstruction material. **The stop-ring below the head reduces the risk of fracturing the apex of the root canal.**

## Technical Features

### Disposable Screwdriver

ATD COLOR-LINK posts are individually premounted on screwdrivers, making insertion in the root canal safer, cleaner and easier. This system guarantees a higher level of hygiene (avoiding the risk of contamination of the post). Time is saved because insertion of the post into the screwdriver and sterilization of the screwdriver between patients are now eliminated. The disposable plastic screwdrivers and the ATD COLOR-LINK endodontic posts are autoclavable at 135°C.

### The ATD COLOR-LINK Endodontic Post

The post has a cylindrical shape; the head is cubic with a cross slot and retentive undercut. Below the head is a stop-ring that prevents over-tightening of the post in the root canal past the desired limit. This avoids the risk of fracturing the root's apex.

### The Modular Starter Kit

The modular starter kit with color-coded screwdrivers makes identification of post size extremely easy. After posts of a specific size are finished, the refill dispenser can be placed in the starter kit to help maintain a complete assortment.

### The ATD COLOR-LINK Reamers

The gauged reamers guarantee maximum precision during the preparation of the root canal.

## Available Kits

### ATD 526 COLOR-LINK gold-plated modular starter kit with reamers

This starter kit contains: 90 gold-plated posts in 9 sizes mounted on disposable screwdrivers of 9 different colors (3 reamers, 1 metal cross screwdriver)

### ATD 526/2

Refill box of 9 gold-plated posts — ref. from G-1 to G-9 (1 dispenser of 9 posts)

### ATD 811-813-815 COLOR-LINK reamers

for gold-plated posts

### ATD 527 COLOR-LINK titanium modular starter kit with reamers

This starter kit contains: 54 titanium posts in 9 sizes mounted on disposable screwdrivers of 9 different colors (3 reamers, 1 metal cross screwdriver)

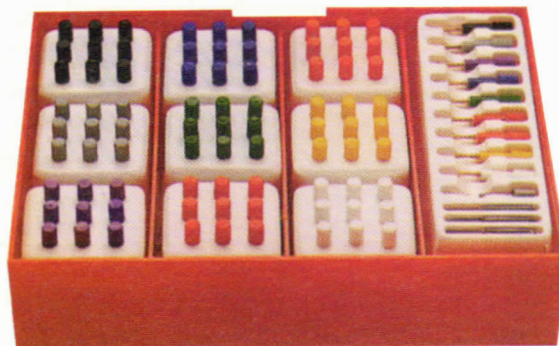

### ATD 527/1

Refill box of 9 titanium posts — ref. from T-1 to T-9 (1 dispenser of 9 posts)

### ATD 816-817-818 COLOR-LINK reamers

for titanium posts (816 ø mm 1.1 → one ring, 817 ø mm 1.3 → three rings, 818 ø mm 1.5 → four rings)

### ATD 5304 metal cross screwdriver
