

Announcing Our Newest Line of Concave & Knife Edge Cutters.

Steel Cutters

Concave Cutter – The rounding-off of chaton claws when setting precious stones requires tools which are precisely adapted to the job on hand. Even when using tools with a perfect blade geometry, chips may build up and clog the tool. BUSCH has developed the 411CCC (Clean Cut Cupbur) specially to prevent this from happening.

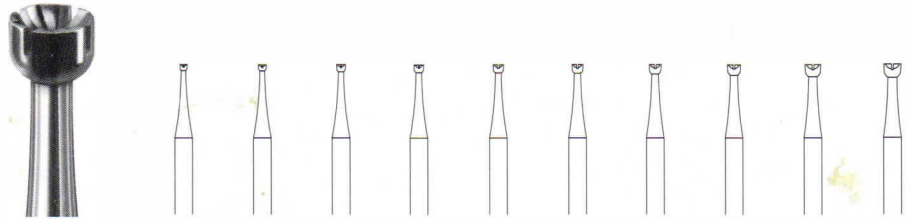

In addition to the specially developed blade geometry, it is the cross-recessed head that makes the 411CCC so special, for it improves the discharge of chips and increases the rate of removal – without clogging the blades.

Concave Cutter with cross-recessed head, patent pending.

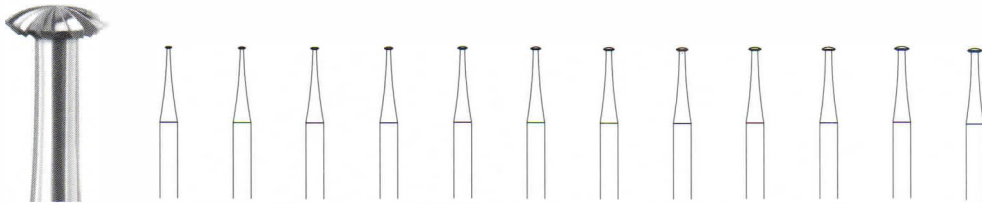

The 411CCC is made out of tool steel and available individually in 10 different sizes or as a complete set.

CCC-Bur (Clean Cut Cupbur)
